

Hands-on Activity 4.3 Creating a Simple Responsive Webpage with Bootstrap 5	
Course Code: CPE 025B	Program: BSCPE
Course Title: Emerging Technologies in CPE 2	Date Performed: 02/16/2026
Section: CPE32S4	Date Submitted: 02/16/2026
Name: Bautista, Jhon Hendricks	Instructor: Engr. Neal Barton James Matira
1. Discussion	
This module mainly tackles the usage of Bootstrap in website development. Bootstrap is a CSS framework wherein it helps you build a website without making elements and styles from scratch. It uses a library of pre-written code which has a vast coverage of the CSS essentials. Mainly we can implement Bootstrap by properly linking the project using the Bootstrap CDN or downloading the files locally so we can implement it in the web. This framework is able to utilize many of the CSS properties wherein it can use the grid system and flexbox. Also it can create different utility classes and media handling. This is used to add margins, paddings, colors and text alignment. Lastly, Bootstrap has many built in UI elements such as nav bars, cards, carousels and models which can be easily implemented by copying the code in the documentation. Bootstrap is a versatile framework which encompasses many of the common CSS elements and styling and helps developers push out good designs with faster development.	
3. Procedure	
Scenario You are tasked with creating a simple, responsive webpage for a fictional company, "Tech Solutions". You'll use Bootstrap 5 to quickly build a responsive layout, add components like navigation bars, cards, and forms, and apply utility classes for spacing and alignment. We have provided a basic HTML skeleton for your webpage in the editor under the index.html file. Your task is to apply Bootstrap 5 components and utilities to this HTML structure to create a professional-looking, responsive webpage. Instructions Follow the instructions below to create the webpage step by step: 1. Set Up Bootstrap Include Bootstrap 5 in your project by adding the CDN links in the <head> section of your HTML file. Show Sample Implementation 2. Create a Responsive Navigation Bar Add a responsive navigation bar at the top of the page using Bootstrap's navbar component. Include the company name and links to Home, About, Services, and Contact pages. Show Sample Implementation 3. Create a Hero Section Add a hero section with a background image, a heading, and a call-to-action button. Use Bootstrap's utility classes for alignment and spacing. Show Sample Implementation 4. Add a Services Section Create a section to showcase the services offered by the company. Use Bootstrap's grid system to create a responsive layout with three columns. Each column should contain a card component.	

Show Sample Implementation

5. Add a Contact Form

Add a contact form using Bootstrap's form components. The form should include fields for name, email, and message, and a submit button.

Show Sample Implementation

6. Review and Test

Review your webpage to ensure all Bootstrap components are applied correctly and the page is responsive.

Experiment with different Bootstrap classes and components to further enhance your webpage.

4. Output

HTML CODE

HTML

```

CONCLUSION

After performing this activity I was able to learn about the CSS framework Bootstrap. For this activity I learned that Bootstrap is a helpful library of CSS elements which has pre-made code for different styling elements and layout properties. I learned it has many useful components which can be easily used by linking the CDN or downloading the files and using it in your project. After learning the basic implementation of Bootstrap I tried to use it in my own sample website. I simply tried to use all appropriate elements I saw in the documentation for my sample marketplace. Mainly I used a new nav bar, a carousel button, and cards. I also utilized the grid system which was easier than doing it myself. After doing my sample website I can say that the Bootstrap framework really helped faster development since i did not

need to make the different styling of elements from scratch, I simply picked the different things that can be used and relevant for my project and connect them properly.
